

不锈钢点支配件表面处理效果

The surface finish effect of the stainless steel accessories for the point-fixed glass curtain wall

1. 对于外形复杂，不易抛光的配件，建议采用光亮喷丸处理。
 2. 本页为我司标准的表面处理效果，客户有特殊表面处理要求时请提前提供样板由我司评审。
1. As for accessories of complex appearance and difficult polishing,it is suggested adopting the bright shot blasting surface treatment.
2. This page shows the standard surface finish effect of our company.If any special requirement of the surface finish is requested, please send the model for our analysis and judgement.

点支配件氟碳涂层表面处理效果

The surface finish effect of fluorocarbon coating for the point-fixed glass curtain wall fittings

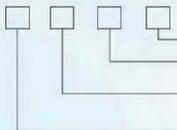

驳接头

Routel

• 型号规则

Principle for making the model number

同类序号(阿拉伯数字); The same type No.(Arabic Numeral)

分类号(阿拉伯数字); Classification No.(Arabic Numeral)

类型代号(“F”为浮头式; “C”为沉头式; “J”为夹持式);

Type Code (“F”stands for the flat cap routel; “C”stands for the countersunk routel; “J” stands for the splice routel)

名称代号(用大写字母“T”表示);

Name code(Using the capital letter of “T”to represent.)

• 配件选用常用计算公式

The commonly used computing formula of the accessories' selection

① 玻璃面板重量 The weight of the glass panel

$$G_k=T*B*H*\rho$$

G_k ——玻璃面板重量(N); The weight of the glass panel(N)

T——玻璃的有效厚度(mm); The valid thickness of the glass(mm)

B——玻璃的宽度(m); The width of the glass(m)

H——玻璃的高度(m); The height of the glass(m)

ρ ——玻璃的重力密度(取25.6); The gravity density of the glass(Default: 25.6)

② 径向力 Radial Force

$$F_r=1.2G_k/n$$

F_r ——单孔径向力(N); The radial force for a single hole(N)

G_k ——玻璃面板重量(N); The weight of the glass panel(N)

n——承重数, 通常为2, 代表一块玻璃重量由上部两孔承受;

The number of loading,usually supposed to be 2.it represents that the glass weight is supported by the upper two holes.

③ 轴向力 Axial Force

$$F_x=q*B*H/n$$

F_x ——轴向承载力(N); Axial bearing capacity(N)

q——面外均匀荷载设计值, 主要指风荷载(N/m²);

Even distributed design value of the load on the glass panel,mainly supposed to be the wind load (N/m²)

B——玻璃的宽度(m); The width of the glass(m)

H——玻璃的高度(m); The height of the glass(m)

n——通常为4, 代表四点支承。四点以外支承不适用此公式;

It is usually four.represents four-point supporting.This formula cannot be adopted to the supporting of more than four points.

• 技术要点

Technical main points

- ① 球铰驳接头: 球铰驳接头可以减小面外变形时玻璃开孔处的应力集中。
- ② 隔热驳接头: 采用断热桥原理设计。能有效降低室内的热量散失和配件表面结露。
- ③ 外装驳接头: 主要适用于在室外侧进行玻璃安装的工程。
- ④ 防尘驳接头: 防尘套可阻止灰尘进入驳接头的转动部位,避免影响其正常功能。
- ⑤ 中空(夹层)玻璃用驳接头: 此驳接头的优点在于:

a.杜绝了驳接头处漏水的可能

b.应用于玻璃幕墙时, 幕墙表面更美观。

- ⑥ 倾心可调驳接头: 通过转动铝圈和底座调节驳接头的倾心量。

①The spherical hinged routel:It can reduce the stress concentration of the glass holes caused by the glass deformation.

②Heat insulation routel:Adopting the Bridge cutoff theory to the design.It can reduce the heat loss of the interior and the surface sweating of routel.

③Outside installation routel:It mainly used to the condition when there is not enough room for installation or it is not convenient to install from the interior, but easy to install from the outside.

④The dust-proof routel:The dust-proof cover can prevent the dust from entering the rotating part of the routel to avoid affecting its normal function.

⑤The routel applies to the hollow glass(laminated glass);the advantage of this routel:

a.Avoiding the possibility of water seepage of the routel.

b.The surface of the glass curtain wall will be more beautiful.

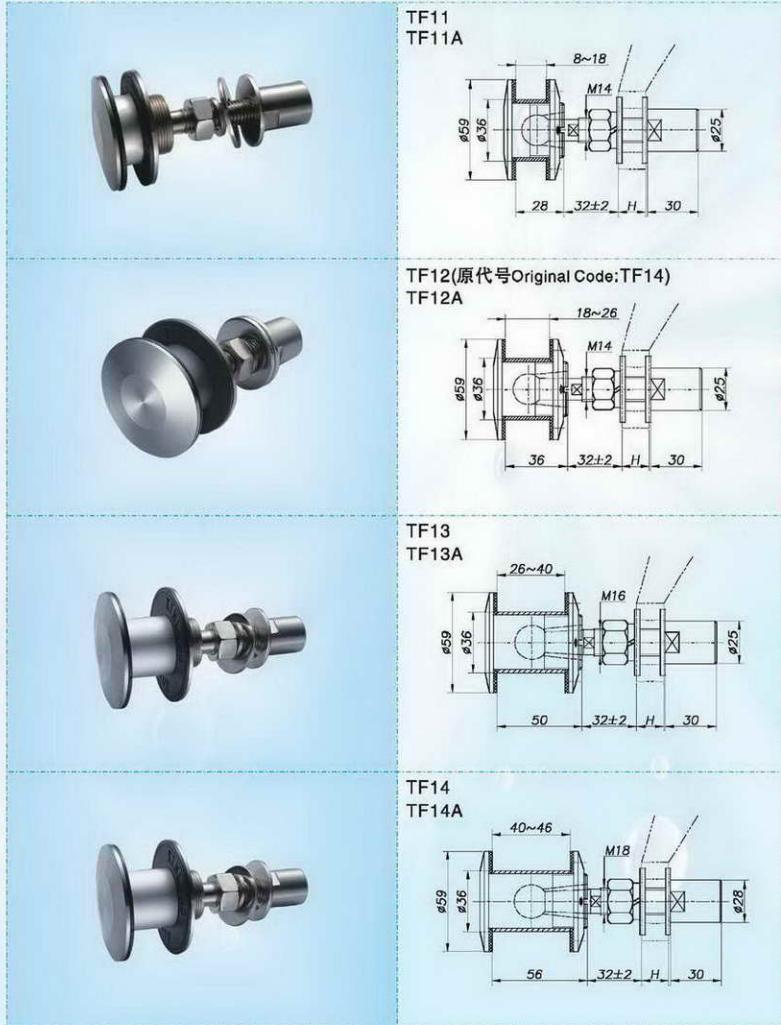

⑥The routel with the adjustable off center:To adjust the off center magnitude of the routel through turning the aluminium washer and the base.
